

VITAL & HEALTH STATISTICS

Current Estimates From the National Health Interview Survey United States, 1983

Includes estimates on incidence of acute conditions, episodes of persons injured, disability days, physician contacts, prevalence of chronic conditions, limitation of activity, hospitalizations, and assessed health status. Estimates are based on data collected in the National Health Interview Survey of 1983.

Current Estimates From the National Health Interview Survey

by Staff of Division of Health Interview Statistics

Introduction

Each year since 1963 the National Center for Health Statistics has published Current Estimates from the National Health Interview Survey. The primary purpose of this publication has been to present a summary of the health-related characteristics derived from the core questionnaire during the previous year of data collection, and to publish the questionnaires and Technical notes on methods.

This report presents national estimates of acute illnesses and injuries, disability days, limitation of activity due to chronic conditions, prevalence of selected reported chronic conditions, respondent-assessed health status, and measures of health care utilization for 1983. These variables represent the basic health items for which data were collected in the 1983 National Health Interview Survey (NHIS) of the U.S. civilian noninstitutionalized population.

The detailed tables in this report include data on people classified by age alone; by age, sex, race, and family income; and by geographic region and place of residence. Other variables of special relevance to particular health-related characteristics are also included. For instance, the volume of annual physician contacts is shown by the type of place where the visit occurred.

This report shows selected statistics from the core questionnaire of the 1983 NHIS. Another Current Estimates report in Series 10 (No. 150) presents detailed data for 1982 that are comparable to data shown in this report for 1983.

Since 1979, the NHIS has employed the ninth revision of the *International Classification of Diseases*¹ for the coding of illnesses and injuries. However, a major change made in 1982 affects the comparison of 1982 and 1983 illness data with data from earlier years. Beginning in 1982, the questionnaire and data preparation procedures of the survey were extensively revised. (See appendix IV, Series 10, No. 150, and Series 1, No. 18, for details).^{2,3}

Although published reports are the primary vehicle for disseminating estimates from NHIS, data are also available in the form of standardized microdata tapes that include the core characteristics included in each year's survey from 1969 through 1983. Questions pertaining to the cost and availability of all core tapes should be directed to the National Technical Information Service, 5285 Port Royal Road, Springfield, Va. 22161. Public use tapes are also available for supplemental topics to the NHIS from 1973 through 1983. Microdata tape subjects available for 1983 include alcohol use and other health practices, use of dental care, doctor services, and health insurance. These tapes and information about them are available from the National Center for Health Statistics, Division of Health Interview Statistics, Computer Systems and Programming Staff, 3700 East-West Highway, Hyattsville, Md. 20782.

Source and limitations of the data

The information from the National Health Interview Survey presented in this report is based on data collected in a continuing nationwide survey by household interviews. Each week a probability sample of the civilian noninstitutionalized population of the United States is interviewed by personnel of the U.S. Bureau of the Census. Information is obtained about the health and other characteristics of each member of the household.

The sample for 1983 was composed of approximately 41,000 households containing about 106,000 persons living at the time of the interview. The total noninterview rate was 3.3 percent; 2.0 percent was due to respondent refusal, and the remainder was primarily due to failure to locate an eligible respondent at home after repeated calls.

A description of the survey design, the methods used in estimation, and general qualifications of the data obtained from the survey are presented in appendix I. Because the estimates shown in this report are based on a sample of the population, they are subject to sampling errors. Therefore, particular attention should be paid to the section entitled "Reliability of estimates." Sampling errors for most of the estimates are relatively low. However, where an estimated number or the numerator or denominator of a rate or percent is small, the sampling error may be high. Charts of relative sampling errors and instructions for their use are included in appendix I.

All the information collected in the survey results from information reported by a responsible family member residing in the household. When possible all adult family members participate in the interview. However, proxy responses are accepted for family members who are not at home and are required for all children and for family members who do not meet the National Health Interview Survey criteria required before a person may serve as a respondent.

Although a considerable effort is made to ensure accurate reporting, the information from proxy or self-respondents may be inaccurate because the respondent is unaware of relevant information, has forgotten it, does not wish to reveal it to an interviewer, or did not understand the intended meaning of a question.

The major concepts for which estimates are shown in this report are defined in appendix II. Some of the terms have specified meanings for the purpose of the survey. For example,

estimates of the incidence of acute conditions include, with certain exceptions, those conditions that had started during the 2-week period prior to the interview and that involved either medical attention or restricted activity. The exceptions, listed in appendix II, are certain conditions, such as heart trouble and diabetes, that are always considered chronic regardless of duration or onset.

Estimates of the number of disability days associated with acute conditions are derived from the number of disability days experienced during the 2-week period prior to the week of interview. The estimates include all such days reported even if the acute condition causing the disability had its onset prior to the 2-week period. Disability days associated with acute conditions are recorded on the basis of the conditions. If an individual reports more than one illness or injury on the same day, the count of disability days will exceed the actual number of days disabled, that is, person-days of disability.

Appendix III includes a copy of the questionnaires and flashcards used to obtain the information. Illnesses and injuries are coded using the ninth revision of the *International Classification of Diseases*.¹ The Division of Health Interview Statistics, National Center for Health Statistics, should be contacted for information about coding and editing procedures used to produce the final data file from which the estimates shown in this report are derived.

In this report, terms such as "similar" and "the same" mean that no statistically significant difference exists between the statistics being compared. Terms relating to difference (for example, "greater" or "less") indicate that differences are statistically significant. The *t*-test with a critical value of 1.96 (0.05 level of significance) was used to test all comparisons that are discussed. Lack of comment regarding the difference between any two statistics does not mean the difference was tested and found to be not significant.

The following sections briefly define each of the health-related characteristics included in this report, indicate the 1983 estimates associated with each of the characteristics, and compare these estimates to the 1982 estimates. Appendix II should be consulted for a more detailed definition of the concepts. Tables 1-76 present the substantive statistical findings, and table 77 presents the population numbers on which rates and percents are based.

Health status

Acute conditions

An acute condition is defined by the National Health Interview Survey (NHIS) as a type of illness or injury that ordinarily lasts less than 3 months, that was first noticed less than 3 months before the reference date of the interview, and that was serious enough to have had an impact on behavior. Only two types of impact are considered: First, whether the illness or injury caused the person to cut down for at least a half a day on the things he or she usually does; and, second, whether a doctor was contacted regarding the illness or injury.

Annual incidence

Tables 1–5 show the incidence rate, and tables 6–10 the incidence of acute conditions by the type of conditions and sociodemographic variables. Although the incidence rate for 1983 of 174.7 acute conditions per 100 persons per year appears to be about 5 percent higher than the 1982 rate, the difference is not statistically significant. There was, however, a significantly higher incidence rate of influenza in 1983 compared with 1982.

For broad types of acute conditions, the 1983 incidence rate per 100 persons ranked as follows: Respiratory conditions (85.0), injuries (27.5), infective and parasitic diseases (20.3), and digestive system conditions (7.6).

Percent medically attended

Tables 11–15 show data on one impact of illness or injury: Contact with a physician. Table 11 shows that 59.6 percent of acute conditions reported in the NHIS were medically attended. Of the broad types of acute conditions, injuries were proportionately most often medically attended (87.6 percent) and respiratory conditions were least often medically attended (42.0 percent).

Restricted activity associated with acute conditions

There are four types of restricted activity resulting from illness, injury, or impairment measured in the NHIS: Days lost from work for currently employed persons 18 years of age and over, school days missed by youths 5–17 years of age, days spent in bed (which may overlap either of the prior types), and other days on which a person cuts down on the things he or she usually does. Estimates for days for which a person cuts down on his or her usual activity are not presented separately, instead they are included in the generic concept of “restricted activity days.” The other three types of restricted activity are also in-

cluded in the generic concept “restricted activity,” but are shown separately in most presentations of restricted-activity data from the NHIS. A person may restrict his or her activity on a given day as a result of more than one condition, and these conditions may be acute or chronic.

Tables 16–20 show the incidence rate and tables 21–25 the incidence of restricted activity associated with acute conditions by type of condition and sociodemographic characteristics. The incidence rate for 1983 of 721.8 days per 100 persons per year is about 12 percent higher than the rate for 1982. The estimates for three of the types of restricted activity associated with acute conditions are shown in parallel fashion in tables 26–49. The incidence rate of 335.0 bed days per 100 persons per year (table 26, with the incidence shown in table 31) is about 13 percent higher than the 1982 rate. The incidence rate of 272.2 work loss days per 100 currently employed persons 18 years of age and over per year (table 36, with the incidence shown in table 41) is not significantly different from the comparable 1982 rate. The incidence rate of 420.2 school-loss days per 100 youths 5–17 years of age (table 46, with the incidence shown in table 48) is about 15 percent above the 1982 rate.

Incidence by quarter

The 1983 incidence rate and incidence of acute conditions by quarter are shown in table 50. The rate for the first quarter of 1983 is 14.8 percent higher than the corresponding 1982 rate. (Rates for other calendar quarters do not differ significantly between years.) The increase for the first quarter may result from two factors (at least in part). First, the incidence of influenza was higher in the first quarter of 1983 than in the first quarter of 1982. Second, acute conditions probably were underestimated early in 1982 because interviewers had difficulty with the new questionnaire; by early 1983 those difficulties were overcome, and reporting was more complete and accurate, causing the appearance of an increase over 1982.

Episodes of persons injured

The same person might have been injured in two or more episodes during the 2-week reference period. Therefore, this report uses the concept of “episodes of persons injured” (rather than “persons injured”), to indicate that the same person may be included in the estimate more than one time during the 2-week reference period.

Also, it should be noted that estimates related to episodes of persons injured differ from the injury estimates shown in

tables 1–50. The estimates shown there refer to the *number of injuries* sustained in episodes involving personal injury, while the statistics discussed in this section refer to the *number of episodes* that involved one or more injuries.

Table 51 shows the incidence rate of episodes of persons injured and table 52 the incidence of such episodes by socio-demographic characteristics; whether a moving motor vehicle was involved (and, if so, whether this occurred in traffic); where the episode occurred; and, for persons 18 years of age and over, whether they were working at a job or business at the time the episode occurred. The overall incidence rate of 26.6 per 100 persons per year in 1983 is relatively unchanged from the corresponding estimate of 26.4 for 1982.

Restricted activity associated with injury and impairment due to injury

As is clear in the case in which a person receives a dislocation of his or her back due to an accident, an injury may have health-related effects for many years after it occurs, or, for that matter, even for a lifetime. The estimates of restriction in activity shown in tables 53 and 54 and the bed-days shown in tables 55 and 56 are based on the present effects of injuries whenever they may have occurred. Thus, these estimates include the days shown in earlier tables for acute injuries and also the days during which a person restricted his or her activity during 1983 because of the effects of injuries suffered prior to 1983. In many cases these old injuries have become impairments, and any restrictions in activity experienced during 1983 due to an impairment resulting from any injury-related event is also included.

Compared with 1982, the rate of restricted activity days per 100 persons per year associated with episodes of personal injury in 1983 (248.0, table 53) appears to be 3.6 percent higher, but the increase is not statistically significant. For bed days per 100 persons per year associated with episodes of persons injured, the rate in 1983 (80.3, table 55) was the same as the rate in 1982.

Prevalence of reported chronic conditions

Chronic conditions are defined as conditions that either (a) were first noticed 3 months or more before the reference date of the interview or (b) belong to a group of conditions (such as heart disease, diabetes, and so forth) that are considered chronic regardless of when they began. For the purpose of estimating the prevalence of reported chronic conditions, the total NHIS sample is divided into six representative subsamples; each subsample is administered one of six checklists of types of chronic conditions. Respondents were asked to indicate the presence or absence of each condition specified on the particular list administered to them. Because the presence or absence of many types of chronic conditions is often ambiguous, several “impact” questions are asked about each condition reported. The questions include whether the person has been hospitalized for the condition and the number of times he or she has stayed in bed for the condition during the 12 months prior to the interview.

Tables 57–66 show the reported prevalence and prevalence rates for some of the more common conditions associated with each of the six lists. Totals for all chronic conditions are not shown because the NHIS does not measure the total number of chronic conditions for each person. It should also be noted that, because a person may have had more than one chronic condition, the sum of conditions that are counted will exceed the sum of persons having had those conditions.

Tables 57–61 show the prevalence rate and tables 62–66 the prevalence of selected chronic conditions. As may be noted, the reported conditions with the highest prevalence rates are sinusitis, arthritis, and hypertension (with rates per 1,000 persons of 134.2, 131.3, and 121.3, respectively).

Limitation of activity due to chronic conditions

Table 67 indicates that the percent of persons reporting limitation, but not in their major activity, increases with age. This pattern is similar for those reporting limitation in major activity; the only exception is that the percent reporting limitation is higher for those 65–69 years of age than for those 70 years and over. This difference is probably due to the fact that limitation in activity is measured differently among these ages, with activity from 65–69 years being based on ability to work and from 70 years and over being based on capacity for independent living. (See appendix II.)

Table 68 shows the frequency distribution according to degree of activity limitation. A larger number of individuals 45–64 years of age reported limitation with regard to their major activity than individuals in any other age category. However, this pattern is not repeated when limitations in other than major activity are considered. In this category, those 65 years of age and over reported the highest frequency of limitation.

Restricted activity due to acute and chronic conditions

Earlier the estimates of restricted activity days associated with acute conditions were shown (tables 16–49), and the relationship between the types of restricted activity discussed. The estimates shown in table 69 are for person days of restricted activity caused by either acute or chronic conditions.

Compared with 1982, there is no significant difference in 1983 for restricted-activity days, bed days, or school-loss days; however, the rate for work-loss days for currently employed persons (4.2 compared with 4.6) is 8.7 percent lower.

Respondent-assessed health status

Data on assessed health status were obtained by asking respondents to assess their health or that of family members living in the same household as excellent, very good, good, fair, or poor. Table 70 shows the percent distribution for these categories according to sociodemographic characteristics. Most persons in the civilian noninstitutionalized population were assessed as “excellent” (39.9 percent) or “very good” (25.5 percent). Only about 3.1 percent were assessed as “poor.”

Care should be taken in comparing these results for assessed health status with earlier results from the NHIS. Prior to 1982 the questions from which these data are derived included only four categories (excellent, good, fair, and poor), and the comparison was made in terms of people of the same

age and sex as the person being assessed. The 1982 and 1983 questionnaires use the five categories listed in the preceding paragraph and do not state any comparison criteria, such as persons of the same age and sex.

Utilization of health services

Physician contacts

A contact is defined as a consultation with a physician, in person or by telephone, for examination, diagnosis, treatment, or advice. The visit is considered a doctor visit if the service is provided by the physician or by another person acting under the physician's supervision.

Annual incidence

Table 71 shows the incidence and number of doctor contacts reported for 1983. The rate for 1983 was 5.1 doctor contacts per person per year.

Aside from the sociodemographic characteristics, the rate and frequencies are also shown by the place of contact. The rate was highest for doctor's office (2.9 per person per year), and it was less than one contact per person per year for each of the other places mentioned (telephone, hospital, and other).

Interval since last contact

Table 72 shows the percent distribution and number of persons by the interval of time since the person last had a doctor contact. The estimates for the rate of doctor contacts do not include contacts while a person was an overnight patient in a short-stay hospital, but such contacts are included in the definitions of the interval since a person last saw or talked to a doctor or a doctor's assistant.

Table 72 indicates that about 74.7 percent of the civilian noninstitutionalized population had contact with a doctor during the year preceding interview. This estimate is similar to the 1982 estimate (75.4 percent).

Hospitalization

Respondents in the NHIS are asked to describe any hospitalizations during the year preceding the interview that involved at least a 1-night stay in the hospital. Two of the measures obtained through this series of questions are the number of times and number of days spent in short-stay hospitals in the

12 months prior to interview. Because persons who have been institutionalized or have died in a given reference period are not included in the NHIS, the rates and frequencies shown in this report will vary from those based on all overnight patients who entered a short-stay hospital during any given period of time. The difference will be especially great for older persons. Therefore, these data should not be used as estimates of the number or rate of hospitalization for all elderly people in the noninstitutionalized population.

Hospital episodes

Tables 73 (percent distribution) and 74 (frequency) show the distribution of short-stay hospital episodes including and excluding deliveries by the number of times a person was hospitalized during the year preceding interview and by sociodemographic characteristics.

The category "delivery" is based on the reason the woman entered the hospital, not on whether a delivery actually occurred. As such, the estimate for deliveries does not necessarily correspond to the number of births in hospitals during the reference period. In 1983, 89.9 percent of persons had no hospitalizations during the year preceding interview. This is similar to the corresponding 1982 estimate (89.7 percent), as are the estimates for the percent of persons with one, two, or three or more hospitalizations.

Hospital days

Associated with the number of times a person was a patient in a short-stay hospital during the year preceding interview is the total number of days (more correctly, nights) the person spent as a patient in the hospital. Table 75 shows that persons with one or more hospitalizations spent an average of 9.2 days in the hospital during the year preceding interview. This is identical to the corresponding rate for 1982. Table 76 shows the estimated number of days by the number of times people were hospitalized (including and excluding deliveries) and sociodemographic characteristics.

25. Number of restricted-activity days associated with acute conditions, by geographic region, place of residence, and type of condition: United States, 1983 40

Bed days: Rates

26. Number of bed days associated with acute conditions per 100 persons per year, by age and type of condition: United States, 1983 41
27. Number of bed days associated with acute conditions per 100 persons per year, by sex, age, and type of condition: United States, 1983 42

28. Number of bed days associated with acute conditions per 100 persons per year, by race, age, and type of condition: United States, 1983	43
29. Number of bed days associated with acute conditions per 100 persons per year, by family income, age, and type of condition: United States, 1983	44
30. Number of bed days associated with acute conditions per 100 persons per year, by geographic region, place of residence, and type of condition: United States, 1983	46

Bed days: Frequencies

31. Number of bed days associated with acute conditions, by age and type of condition: United States, 1983	47
32. Number of bed days associated with acute conditions, by sex, age, and type of condition: United States, 1983	48
33. Number of bed days associated with acute conditions, by race, age, and type of condition: United States, 1983	49
34. Number of bed days associated with acute conditions, by family income, age, and type of condition: United States, 1983	50
35. Number of bed days associated with acute conditions, by geographic region, place of residence, and type of condition: United States, 1983	52

Work-loss days: Rates

36. Number of work-loss days associated with acute conditions per 100 currently employed persons 28 years of age and over, by age and type of condition: United States, 1983 ...	53
37. Number of work-loss days associated with acute conditions per 100 currently employed persons 18 years of age and over, by sex, age, and type of condition: United States, 1983	54
38. Number of work-loss days associated with acute conditions per 100 currently employed persons 18 years of age and over, by race, age, and type of condition: United States, 1983	55
39. Number of work-loss days associated with acute conditions per 100 currently employed persons 18 years of age and over, by family income, age, and type of condition: United States, 1983	56
40. Number of work-loss days associated with acute conditions per 100 currently employed persons 18 years of age and over, by geographic region, place of residence, and type of condition: United States, 1983	57

Work-loss days: Frequencies

41. Number of work-loss days associated with acute conditions for currently employed persons 18 years of age and over, by age and type of condition: United States, 1983	58
42. Number of work-loss days associated with acute conditions for currently employed persons 18 years of age and over, by sex, age, and type of condition: United States, 1983 ...	59
43. Number of work-loss days associated with acute conditions for currently employed persons 18 years of age and over, by race, age, and type of condition: United States, 1983 ...	60
44. Number of work-loss days associated with acute conditions for currently employed persons 18 years of age and over, by family income, age, and type of condition: United States, 1983	61

45. Number of work-loss days associated with acute conditions for currently employed persons 18 years of age and over, by geographic region, place of residence, and type of condition: United States, 1983	62
---	----

School-loss days: Rates

46. Number of school-loss days associated with acute conditions per 100 youths 5–17 years of age, by sex, race, family income, and type of condition: United States, 1983	63
47. Number of school-loss days associated with acute conditions per 100 youths 5–17 years of age, by geographic region, place of residence, and type of condition: United States, 1983	64

School-loss days: Frequencies

48. Number of school-loss days associated with acute conditions for youths 5–17 years of age, by sex, race, family income and type of condition: United States, 1983	65
49. Number of school-loss days associated with acute conditions for youths 5–17 years of age, by geographic region, place of residence, and type of condition: United States, 1983	66

Incidence of acute conditions by quarter

50. Number of acute conditions per 100 persons per year and number of acute conditions, by quarter and type of condition: United States, 1983	67
---	----

Episodes of persons injured and associated restriction of activity

51. Number of episodes of persons injured per 100 persons per year, by whether in moving motor vehicle, whether at work, place of accident, and sociodemographic characteristics: United States, 1983	68
52. Number of episodes of persons injured, by whether in moving motor vehicle, whether at work, place of accident, and sociodemographic characteristics: United States, 1983	70
53. Number of restricted-activity days associated with episodes of persons injured per 100 persons per year, by whether in moving motor vehicle, whether at work, place of accident, and sociodemographic characteristics: United States, 1983	72
54. Number of restricted-activity days associated with episodes of persons injured, by whether in moving motor vehicle, whether at work, place of accident, and sociodemographic characteristics: United States, 1983	74
55. Number of bed days associated with episodes of persons injured per 100 persons per year, by whether in moving motor vehicle, whether at work, place of accident, and sociodemographic characteristics: United States, 1983	76
56. Number of bed days associated with episodes of person injured, by whether in moving motor vehicle, whether at work, place of accident, and sociodemographic characteristics: United States, 1983	78

Prevalence of chronic conditions

Rates

57. Number of selected reported chronic conditions per 1,000 persons, by age: United States, 1983	80
58. Number of selected reported chronic conditions per 1,000 persons, by sex and age: United States, 1983	82
59. Number of selected reported chronic conditions per 1,000 persons, by race and age: United States, 1983	84
60. Number of selected reported chronic conditions per 1,000 persons, by family income and age: United States, 1983 ...	86
61. Number of selected reported chronic conditions per 1,000 persons, by geographic region and place of residence: United States, 1983	90

Frequencies

62. Number of selected reported chronic conditions, by age: United States, 1983	92
63. Number of selected reported chronic conditions, by sex and age: United States, 1983	94
64. Number of selected reported chronic conditions, by race and age: United States, 1983	96
65. Number of selected reported chronic conditions, by family income and age: United States, 1983	98
66. Number of selected reported chronic conditions, by geographic region and place of residence: United States, 1983	102

Limitation of activity due to chronic conditions

67. Percent distribution of persons with limitation of activity due to chronic conditions by degree of limitation, according to sociodemographic characteristics: United States, 1983 ...	104
68. Number of persons with limitation of activity due to chronic conditions by degree of limitation, according to sociodemographic characteristics: United States, 1983	106

Restricted activity associated with acute and chronic conditions

69. Number of days per person per year and number of days of activity restriction due to acute and chronic conditions, by type of restriction and sociodemographic characteristics: United States, 1983	108
---	-----

Respondent-assessed health status

70. Number of persons and percent distribution by respondent-assessed health status, according to sociodemographic characteristics: United States, 1983	110
---	-----

Physician contacts

71. Number per person per year and number of physician contacts, by place of contact and sociodemographic characteristics: United States, 1983	112
72. Percent distribution and number of persons by interval since last physician contact, according to sociodemographic characteristics: United States, 1983	114

Hospitalization

73. Percent distribution of living persons by number of short-stay hospital episodes during the year preceding interview for all causes and excluding deliveries, according to sociodemographic characteristics: United States, 1983	116
74. Number of living persons by number of short-stay hospital episodes during the year preceding interview for all causes and excluding deliveries and sociodemographic characteristics: United States, 1983	118
75. Number of short-stay hospital days during the year preceding interview per living person hospitalized for all causes and excluding deliveries, by number of episodes and sociodemographic characteristics: United States, 1983	120
76. Number of short-stay hospital days during the year preceding interview for living persons hospitalized for all causes and excluding deliveries, by number of episodes and sociodemographic characteristics: United States, 1983	122

Population

77. Number of persons and number of currently employed persons 18 years of age and over, by sociodemographic characteristics: United States, 1983	124
---	-----

Table 1. Number of acute conditions per 100 persons per year, by age and type of condition: United States, 1983

[Data are based on household interviews of the civilian noninstitutionalized population. The survey design, general qualifications, and information on the reliability of the estimates are given in appendix I. Definitions of terms are given in appendix II]

Type of acute condition	All ages	Under 5 years	5-17 years	18-24 years	25-44 years	45 years and over

¹Totals for income categories do not sum to total bed days because persons with unknown family income are not included.

NOTE: The relative standard errors (RSE's) can be found in appendix I, figure II. An estimate of 54 million has a 10-percent RSE; of 13.1 million, a 20-percent RSE; and of 5.8 million, a 30-percent RSE.

Table 35. Number of bed days associated with acute conditions, by geographic region, place of residence, and type of condition: United States, 1983

[Data are based on household interviews of the civilian noninstitutionalized population. The survey design, general qualifications, and information on the reliability of the estimates are given in appendix I. Definitions of terms are given in appendix II]

¹Totals for white and black persons do not sum to total work-loss days because other races are not included.

NOTE: The relative standard errors (RSE's) can be found in appendix I, figure II. An estimate of 35 million has a 10-percent RSE; of 8.6 million, a 20-percent RSE; and of 3.8 million, a 30-percent RSE.

Table 44. Number of work-loss days associated with acute conditions for currently employed persons 18 years of age and over, by family income, age, and type of condition: United States, 1983

[Data are based on household interviews of the civilian noninstitutionalized population. The survey design, general qualifications, and information on the reliability of the estimates are given in appendix I. Definitions of terms are given in appendix II]

¹Includes unknowns for each characteristic.

²For currently employed persons 18 years of age and over only.

³Includes other races and unknown family income.

NOTES: Injuries coded 800–999 in the 9th Revision, *International Classification of Diseases*, and impairments resulting from an accident are included. Injuries involving neither medical attention nor activity restriction are excluded.

The relative standard errors (RSE's) can be found in appendix I, figures III (frequencies from table 52) and VII (frequencies from table 77). Estimates for which the numerator has an RSE of more than 30 percent are indicated with an asterisk.

Table 52. Number of episodes of persons injured, by whether in moving motor vehicle, whether at work, place of accident, and sociodemographic characteristics: United States, 1983

[Data are based on household interviews of the civilian noninstitutionalized population. The survey design, general qualifications, and information on the reliability of the estimates are given in appendix I. Definitions of terms are given in appendix II]

¹Sum of school-loss days for children 5–17 years of age and work-loss days for currently employed persons 18 years of age and over. School-loss days are shown for the age group 5–17 years; work-loss days are shown for the age group 18 years and over and each older age group.

²Includes other races and unknown family income.

NOTE: The relative standard errors (RSE's) can be found in appendix I, figure II. For restricted-activity and bed days, an estimate of 54 million has an RSE of 10 percent; 13.1 million, of 20 percent; and 5.8 million, of 30 percent. For work- or school-loss days, an estimate of 35 million has an RSE of 10 percent; 8.6 million, of 20 percent; and 3.8 million, of 30 percent. Rates for which the numerator has an RSE of more than 30 percent are indicated with an asterisk.

¹Includes unknown place of contact.

²Does not include physician contacts while an overnight patient in a hospital.

³Includes other races and unknown family income.

NOTE: The relative standard errors (RSE's) can be found in appendix I, figures V and VII. An estimate of 14.4 million has a 10-percent RSE; of 3.6 million, a 20-percent RSE; and of 1.6 million, a 30-percent RSE. Rates for which the numerator has an RSE of more than 30 percent are indicated with an asterisk.

Table 72. Percent distribution and number of persons by interval since last physician contact, according to sociodemographic characteristics: United States, 1983

¹Based on reason for admission, not on whether a delivery actually occurred.

²Includes other races and unknown family income.

NOTE: The relative standard errors (RSE's) can be found in appendix I, figures VI (frequencies from table 76) and VII (frequencies from table 74). Estimates for which the numerator has an RSE of more than 30 percent are indicated with an asterisk.

Table 76. Number of short-stay hospital days during the year preceding interview for living persons hospitalized for all causes and excluding deliveries, by number of episodes and sociodemographic characteristics: United States, 1983

[Data are based on household interviews of the civilian noninstitutionalized population. The survey design, general qualifications, and information on the reliability of the estimates are given in appendix I. Definitions of terms are given in appendix II]

Appendix I

Technical notes on methods

Background of this report

This report is one of a series of statistical reports prepared by the National Center for Health Statistics. It is based on information collected in a continuing nationwide sample of households in the National Health Interview Survey (NHIS).

The National Health Interview Survey utilizes a questionnaire for obtaining information on personal and demographic characteristics, illnesses, injuries, impairments, chronic conditions, and other health topics. As data relating to each of these various broad topics are tabulated and analyzed, separate reports are issued that cover one or more of the specific topics.

The population covered by the sample for NHIS is the civilian noninstitutionalized population of the United States living at the time of the interview. The sample does not include members of the Armed Forces or U.S. nationals living in foreign countries. It should also be noted that the estimates shown do not represent a complete measure of any given topic during the specified calendar period because data are not collected in the interview for persons who died during the reference period. For many types of statistics collected in the survey, the reference period covers the 2 weeks prior to the interview week. For such a short period, the contribution by decedents to a total inventory of conditions or services should be very small. However, the contribution by decedents during a long reference period (such as 1 year) might be sizable, especially for older persons.

Statistical design of the National Health Interview Survey

General plan

The sampling plan of the survey follows a multistage probability design that permits a continuous sampling of the civilian noninstitutionalized population of the United States. The sample is designed in such a way that the sample of households interviewed each week is representative of the target population and that weekly samples are additive over time. This feature of the design permits continuous measurement of characteristics of samples by aggregating weeks of data. It also permits more detailed analysis of less common characteristics and smaller categories of health-related items. The continuous collection also has administrative and operational advantages because fieldwork can be handled on a continuing basis with an experienced, stable staff.

The overall sample was designed so that tabulations can be provided for each of the four major geographic regions and

for selected standard metropolitan statistical areas in the United States.

The first stage of the sample design consists of drawing a sample of 376 primary sampling units (PSU's) from approximately 1,900 geographically defined PSU's. A PSU consists of a county, a small group of contiguous counties, or a standard metropolitan statistical area. The PSU's collectively cover the 50 States and the District of Columbia.

With no loss in general understanding, the remaining stages can be combined and treated in this discussion as an ultimate stage. Within PSU's, then, ultimate stage units called segments are defined in such a manner that each segment contains an expected four households. Three main types of segments are used:

- Area segments, which are defined geographically.
- List segments, using 1980 census registers as the frame.
- Permit segments, using updated lists of building permits issued in sample PSU's since 1980.

Census address listings were used for all areas of the country where addresses were well defined and could be used to locate housing units. In general the list frame included the larger urban areas of the United States, from which about two-thirds of the NHIS sample was selected.

The usual NHIS sample consists of approximately 12,000 segments containing about 51,000 assigned households, of which 9,000 are vacant, demolished, or occupied by persons not in the scope of the survey. The 41,000 eligible occupied households yield a probability sample of about 106,000 persons.

Descriptive material on data collection, field procedures, and questionnaire development in NHIS have been published as well as a detailed description of the sample design and estimation procedure.³

Collection of data

Field operations for the survey are performed by the U.S. Bureau of the Census under specifications established by the National Center for Health Statistics (NCHS). In accordance with these specifications, the U.S. Bureau of the Census participates in survey planning, selects the sample, and conducts the field interviewing as an agent of NCHS. The data are coded, edited, and tabulated by NCHS.

NOTE: A list of references follows the text.

Estimating procedures

Because the design of NHIS is a complex multistage probability sample, it is necessary to use complex procedures in the derivation of estimates. Four basic operations are involved:

1. *Inflation by the reciprocal of the probability of selection*—The probability of selection is the product of the probabilities of selection from each step of selection in the design (PSU, segment, and household).
2. *Nonresponse adjustment*—The estimates are inflated by a multiplication factor that has as its numerator the number of sample households in a given segment and as its denominator the number of households interviewed in that segment.
3. *First-stage ratio adjustment*—Sampling theory indicates that the use of auxiliary information which is highly correlated with the variables being estimated improves the reliability of the estimates. To reduce the variability among PSU's within a region, the estimates are ratio adjusted to the 1980 populations within race-residence classes.
4. *Poststratification by age-sex-race*—The estimates are ratio adjusted within each of 60 age-sex-race cells to an independent estimate of the population of each cell for the survey period. These independent estimates are prepared by the U.S. Bureau of the Census. Both the first-stage and post-stratified ratio adjustments take the form of multiplication factors applied to the weight of each elementary unit (person, household, condition, and hospitalization).

The effect of the ratio-estimating process is to make the sample more closely representative of the civilian noninstitutionalized population by age, sex, race, and residence, which thereby reduces sampling variance.

As noted, each week's sample represents the population living during that week and characteristics of the population. Consolidation of samples over a time period such as a calendar quarter, produces estimates of average characteristics of the U.S. population for the calendar quarter. Similarly, population data for a year are averages of the four quarterly figures.

For prevalence statistics, such as number of persons with speech impairments or number of persons classified by time interval since last physician visit, figures are first calculated for each calendar quarter by averaging estimates for all weeks of interviewing in the quarter. Prevalence data for a year are then obtained by averaging the four quarterly figures.

For other types of statistics—those measuring the number of occurrences during a specified time period, such as incidence of acute conditions, number of disability days, or number of visits to a doctor—a similar computational procedure is used, but the statistics are interpreted differently. For these items, the interviewer asks for the respondent's experience over the 2 calendar weeks prior to the week of interview. In such instances, the estimated quarterly total for the statistic is 6.5 times the average 2-week estimate produced by the 13 successive samples taken during the period. The annual total is the sum of the four quarters. Thus the experience of persons interviewed during a year—experience which actually occurred for each person in a 2-calendar-week interval prior to week of interview—is treated as though it measured the total

of such experience during the year. Such interpretation leads to no significant bias.

Explanation of hospital recall

The survey questionnaire uses a 12-month recall period for short-stay hospitalizations; that is, the respondent is asked to report hospitalizations that occurred during the 12 months prior to the week of interview. Information is also obtained on the date of entry into the hospital and duration of stay. Analysis of this information and also the results of special studies have shown that there is an increase in underreporting of hospitalizations with increase in time interval between the discharge and the interview. Exclusive of the hospital experience of decedents, the net underreporting with a 12-month recall is in the neighborhood of 10 percent. It should further be noted that, although the reported frequencies and rates related to hospital episodes are presented in terms of the year in which the data were collected, the estimates are in most cases based on hospitalizations that occurred during the year of data collection and the prior year. Overall, approximately one-half of the reported hospitalizations occurred in the year prior to the year of data collection.

General qualifications

Nonresponse

Data were adjusted for nonresponse by a procedure that imputes to persons in a household whose members were not interviewed the characteristics of persons in households in the same segment who were interviewed. Interviews were completed in 96.7 percent of the sample households.

The interview process

The statistics presented in this report are based on replies obtained in interviews with persons in the sample households. Each person 18 years of age and over present at the time of interview was interviewed individually. For children and for adults not present in the home at the time of the interview, the information was obtained from a related household member such as a spouse or the mother of a child.

There are limitations to the accuracy of diagnostic and other information collected in household interviews. For diagnostic information, the household respondent can usually pass on to the interviewer only the information the physician has given to the family. For conditions not medically attended, diagnostic information is often no more than a description of symptoms. However, other facts, such as the number of disability days caused by the condition, can be obtained more accurately from household members than from any other source because only the persons concerned are in a position to report this information. Regarding this and other types of information, a respondent may not answer a question in the intended manner because he or she has not properly understood the question, has forgotten the event, or does not wish to divulge the answer.

Rounding of numbers

The original tabulations on which the data in this report are based show all estimates to the nearest whole unit. All consolidations were made from the original tabulations using the estimates to the nearest unit. In the final published tables,

the figures are rounded to the nearest thousand, although they are not necessarily accurate to that detail. Devised statistics such as rates and percent distributions are computed after the estimates on which these are based have been rounded to the nearest thousand.

Population figures

Some of the published tables include population figures for specified categories. Except for certain overall totals by age, sex, and race, which are adjusted to independent estimates, these figures are based on the sample of households in NHIS. They are given primarily to provide denominators for rate computation, and for this purpose they are more appropriate for use with the accompanying measures of health characteristics than other population data that may be available. With the exception of the overall totals by age, sex, and race mentioned above, the population figures differ from figures (which are derived from different sources) published in reports of the U.S. Bureau of the Census. Official population estimates are presented in Bureau of the Census reports in Series P-20, P-25, and P-60.

Bias

As in any survey, results are subject to reporting and processing errors and errors due to nonresponse. To the extent possible, these types of errors were kept to a minimum by methods built into survey procedures.⁴ Although it is very difficult to measure the extent of bias in NHIS, a number of studies have been conducted to examine this problem. The results have been published in several reports.⁵⁻⁸ Regarding this and other types of information, a respondent may not answer a question in the intended manner because he or she has not properly understood the question, has forgotten the event, or does not wish to divulge it.

Reliability of estimates

Because the statistics presented in this report are based on a sample, they will differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions, and interviewing personnel and procedures.

The standard error is primarily a measure of sampling variability, that is, the variations that might occur by chance because only a sample of the population is surveyed. The chances are about 68 out of 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 95 out of 100 that the difference would be less than twice the standard error and about 99 out of 100 that it would be less than 2½ times as large. The standard errors shown in this report were computed using the balanced half-sample replication procedure.

Standard error charts

The relative standard error of an estimate is obtained by dividing the standard error of the estimate by the estimate itself and is expressed as a percent of the estimate. For this report, asterisks are shown for any rate or percent with more than a 30-percent relative standard error. Included in this appendix

are charts from which the relative standard errors for estimates shown in the report can be determined.

General rules for determining relative standard errors

The following rules will enable the reader to determine approximate relative standard errors from the charts for estimates presented in this report:

Rule 1. *Estimates of aggregates*—Approximate relative standard errors for estimates of aggregates, such as the number of persons with a given characteristic, are obtained from appropriate curves in figures I–VII. The number of persons in the total U.S. population or in an age-sex-race class of the total population is adjusted to official U.S. Bureau of the Census figures and is not subject to sampling error.

Rule 2. *Estimates of percents in a percent distribution*—Relative standard errors for percents in a percent distribution of a total are obtained from appropriate curves in figures VIII–X. For values that do not fall on one of the curves presented in the chart, visual interpolation will provide a satisfactory approximation.

Rule 3. *Estimates of rates where the numerator is a subclass of the denominator*—This rule applies for prevalence rates or where a unit of the numerator occurs, with few exceptions, only once in the year for any one unit in the denominator. For example, in computing the rate of visual impairments per 1,000 population, the numerator consisting of persons with the impairment is a subclass of the denominator, which includes all persons in the population. Such rates, if converted to rates per 100, may be treated as though they were percents and the relative standard errors obtained from the percent charts for population estimates.

Rule 4. *Estimates of rates where the numerator is not a subclass of the denominator*—This rule applies where a unit of the numerator often occurs more than once for any one unit in the denominator. For example, for the number of persons injured per 100 currently employed persons per year, it is possible that a person in the denominator could have sustained more than one of the injuries included in the numerator. Approximate relative standard errors for rates of this kind may be computed as follows:

- a. Where the denominator is the total U.S. population or includes all persons in one or more of the age-sex-race groups of the total population, the relative error of the rate is equivalent to the relative error of the numerator, which can be obtained directly from the appropriate chart.
- b. In other cases the relative standard error of the numerator and of the denominator can be obtained from the appropriate curve. Square each of these relative errors, add the resulting values, and extract the square root of the sum. This procedure will result in an upper bound on the standard error and will overstate the error to the extent that the correlation between numerator and denominator is greater than zero.

NOTE: This curve represents estimates of relative standard errors based on 1 to 4 quarters of data collection for estimates of aggregates using a 2-week reference period.

EXAMPLE OF USE OF CHART: An estimate of 1,000,000 acute respiratory conditions (on scale at bottom of chart) has a relative standard error of 26 percent (read from scale at left side of chart), or a standard error of 260,000 (26 percent of 1,000,000).

Figure I. Relative standard errors for number of acute conditions

NOTE: These curves represent estimates of relative standard errors based on 1 to 4 quarters of data collection for estimates of aggregates using a 2-week reference period.

EXAMPLE OF USE OF CHART: An estimate of 10,000,000 days of restricted activity (on scale at bottom of chart) has a relative standard error of 23 percent (read from curve A on scale at left side of chart), or a standard error of 2,300,000 (23 percent of 10,000,000).

Figure II. Relative standard errors for days of restricted activity or bed disability (A) and for days lost from work or school (B)

NOTE: This curve represents estimates of relative standard errors based on 1 to 4 quarters of data collection for estimates of aggregates using a 2-week reference period.

EXAMPLE OF USE OF CHART: An estimate of 1,000,000 episodes of persons injured (on scale at bottom of chart) has a relative standard error of 25 percent (read from scale at left side of chart), or a standard error of 250,000 (25 percent of 1,000,000).

Figure III. Relative standard errors for number of episodes of persons injured.

NOTE: Based on a one-sixth subsample over 4 quarters of data collection for estimates of aggregates.

EXAMPLE OF USE OF CHART: An estimate of 1,000,000 of a type of chronic condition (on scale at bottom of chart) has a relative standard error of 14.2 percent (read from scale at left of chart), or a standard error of 142,000 (14.2 percent of 1,000,000).

Figure IV. Relative standard errors for characteristics related to the prevalence of chronic conditions

NOTE: This curve represents estimates of relative standard errors based on 1 to 4 quarters of data collection for estimates of aggregates using a 2-week reference period.

EXAMPLE OF USE OF CHART: An estimate of 10,000,000 physician contacts (on scale at bottom of chart) has a relative standard error of 12 percent (read from scale at left side of chart), or a standard error of 1,200,000 (12 percent of 10,000,000).

Figure V. Relative standard errors for number of physician contacts based on a 2-week reference period

NOTE: This curve represents estimates of relative standard errors based on 4 quarters of data collection for estimates of aggregates using a 12-month reference period.

EXAMPLE OF USE OF CHART: An estimate of 10,000,000 days of hospitalization in the past year (on scale at bottom of chart) has a relative standard error of 9 percent (read from scale at left side of chart), or a standard error of 900,000 (9 percent of 10,000,000).

Figure VI. Relative standard errors for short-stay hospital days based on a 12-month reference period

NOTE: This curve represents estimates of relative standard errors based on 4 quarters of data collection for estimates of aggregates.

EXAMPLE OF USE OF CHART: An estimate of 10,000,000 persons (on scale at bottom of chart) has a relative standard error of 1.9 percent (read from scale at left side of chart), or a standard error of 190,000 (1.9 percent of 10,000,000).

Figure VII. Relative standard errors for population characteristics

NOTE: Base of percent shown on curves in millions. These curves represent estimates of relative standard errors of percents of population characteristics based on 4 quarters of data collection.

EXAMPLE OF USE OF CHART: An estimate of 20 percent (on scale at bottom of chart) based on an estimate of 10,000,000 has a relative standard error of 3.8 percent (read from scale at left side of chart), the point at which the curve for a base of 10,000,000 intersects the vertical line for 20 percent. The standard error in percentage points is equal to 20 percent $\times$ 3.8 percent, or 0.76 percentage points.

Figure VIII. Relative standard errors of percents of population characteristics

Rule 5. Estimates of difference between two statistics (mean, rate, total, etc.)—The standard error of a difference is approximately the square root of the sum of the squares of each standard error considered separately. A formula for the standard error of a difference,

$$d = X_1 - X_2$$

is

$$\sigma_d = \sqrt{(X_1 V_{X_1})^2 + (X_2 V_{X_2})^2}$$

where X_1 is the estimate for class 1, X_2 is the estimate for class 2, and V_{X_1} and V_{X_2} are the relative errors of X_1 and X_2 , respectively. This formula will represent

NOTE: Base of percent shown on curves in millions. These curves represent estimates of relative standard errors of percents of acute conditions based on 1 to 4 quarters of data collection using a 2-week reference period.

EXAMPLE OF USE OF CHART: An estimate of 20 percent (on scale at bottom of chart) based on an estimate of 10,000,000 has a relative standard error of 16.3 percent (read from scale at the left side of chart), the point at which the curve for a base of 10,000,000 intersects the vertical line for 20-percent. The standard error in percentage points is equal to 20 percent $\times$ 16.3 percent, or 3.3 percentage points.

Figure IX. Relative standard errors of percents of acute conditions

the actual standard error quite accurately for the difference between separate and uncorrelated characteristics, although it is only a rough approximation in most other cases. The relative standard error of each

estimate involved in such a difference can be determined by one of the four rules above, whichever is appropriate.

NOTE: Base of percent shown on curves in millions. These curves represent estimates of relative standard errors of percents of characteristics related to chronic conditions based on a one-sixth subsample over 4 quarters of data collection.

EXAMPLE OF USE OF CHART: An estimate of 20 percent (on scale at bottom of chart) based on an estimate of 10,000,000 has a relative standard error of 9 percent (read from scale at the left side of chart), the point at which the curve for a base of 10,000,000 intersects the vertical line for 20 percent. The standard error in percentage points is equal to 20 percent $\times$ 9 percent, or 1.8 percentage points.

Appendix II

Definitions of certain terms used in this report

Terms relating to conditions

Condition—“Condition” is a general term that includes any specific illness, injury, or impairment. Condition data are derived from the survey in two ways. First, respondents are asked to identify any conditions that caused certain types of impact associated with health, such as a visit to a doctor or a day spent in bed. Second, respondents are read lists of selected chronic conditions and asked whether they or any family members have any of these conditions.

At a later point in the survey, a series of questions is asked about each of the conditions identified in either of the two ways just described. The information obtained on each condition helps to clarify the nature of the condition and whether medical services have been involved in its diagnosis or treatment. It also aids in the coding of the condition. All conditions except impairments are coded according to the ninth revision of the International Classification of Diseases,¹ with certain modifications adopted to make the codes more suitable for information derived from a household survey. A special set of codes devised by NHIS is used to code impairments.

Chronic condition—A condition is considered chronic if (1) the respondent indicates it was first noticed more than 3 months before the reference date of the interview, or (2) it is a type of condition that ordinarily has a duration of more than 3 months. Examples of conditions that are considered chronic regardless of their time of onset are diabetes, heart conditions, emphysema, and arthritis. A complete list of these conditions may be obtained by contacting the Division of Health Interview Statistics, National Center for Health Statistics.

Impairment—An impairment is a chronic or permanent defect, usually static in nature, that results from disease, injury, or congenital malformation. It represents a decrease or loss of ability to perform various functions, particularly those of the musculoskeletal system and the sense organs. Impairments are grouped according to type of functional impairment and etiology in the special NHIS impairment codes.

Acute condition—A condition is considered acute if (1) it was first noticed no longer than 3 months before the reference date of the interview and (2) it is not one of the conditions considered chronic regardless of the time of onset. (See definition of chronic condition.) However, any acute condition not associated with either at least one doctor visit or at least one day of restricted activity during the reference period is consid-

ered to be of minor consequence and is excluded from the final data produced by the survey.

Onset of condition—A condition is considered to have had its onset when it was first noticed. This could be the time the person first felt sick or became injured, or it could be the time when the person or family was first told by a physician that the person had a condition of which he or she had been previously unaware.

Incidence of conditions—The incidence of a condition is the number of cases that had their onset during a specified period of time. A person may have more than one acute condition during a period of time or may have the same condition, such as a headache, more than once. Ordinarily, however, a chronic condition can begin only one time during a given reference period.

Prevalence of conditions—The prevalence of a condition is the number of persons who have the condition at a given point in time. Although the prevalence of acute conditions is a meaningful concept, it is seldom used in health statistics, which generally focus on the incidence of acute conditions. If the prevalence of a chronic condition is measured during a period of time (say, each week during a year), then the resulting estimate of prevalence is an average of 52 weekly prevalence estimates. This is called an average annual point prevalence estimate.

Terms relating to disability

Disability—Disability is a general term that refers to any long- or short-term reduction of a person's activity as a result of an acute or chronic condition. **Limitation of activity** refers to a long-term reduction in a person's capacity to perform the average kind or amount of activities associated with his or her age group. **Restriction of activity** refers to particular kinds of behavior usually associated with a reduction in activity due to either long- or short-term conditions. Thus limitation of activity refers to what a person is generally capable of doing, but restriction of activity ordinarily refers to a relatively short-term reduction in a person's activities below his or her normal capacity.

Limitation of activity because of chronic conditions—Persons are classified in terms of the major activity usually associated with their particular age group. The major activities for the age groups are (1) ordinary play for children under 5 years of age, (2) attending school for those 5–17 years of age, (3) working or keeping house for persons 18–69 years of age, and (4) capacity for independent living (e.g., the ability to bathe, shop,

NOTE: A list of references follows the text.

dress, eat, and so forth, without needing the help of another person) for those 70 years of age and over. People aged 18–69 years who are classified as keeping house are also classified by their ability to work at a job or business. (In this report, the major activity of persons 65–69 years is assumed to be working or keeping house; however, questions were also asked about the capacity for independent living in this age group, which would permit an alternative definition of limitation.)

In regard to these activities, each person is classified into one of four categories: (1) unable to perform the major activity, (2) able to perform the major activity but limited in the kind or amount of this activity, (3) not limited in the major activity but limited in the kind or amount of other activities, and (4) not limited in any way. In regard to these four categories, NHIS publications often classify persons only by whether they are limited (groups 1–3) or not limited (group 4). Persons are not classified as limited in activity unless one or more chronic conditions are reported as the cause of the activity limitation. If more than one condition is reported, the respondent is asked to identify the condition that is the major cause of the limitation.

Restriction of activity—Four types of restricted activity are measured in NHIS: *bed days*, *work-loss days* for currently employed persons 18 years of age and over, *school-loss days* for children 5–17 years of age, and *cut-down days*.

A *bed day* is one during which a person stayed in bed more than half a day because of illness or injury. All hospital days for inpatients are considered bed days even if the patient was not in bed more than half a day.

A *work-loss day* is one on which a currently employed person 18 years of age and over missed more than half a day from a job or business.

A *school-loss day* is one on which a student 5–17 years of age missed more than half a day from the school in which he or she was currently enrolled.

A *cut-down day* is a day on which a person cuts down for more than half a day on the things he or she usually does.

Work-loss, school-loss, and cut-down days refer to the short-term effects of illness or injury. However, bed days are a measure of both long- and short-term disability, because a chronically ill bedridden person and a person with a cold could both report having spent more than half a day in bed due to an illness.

The number of restricted-activity days is the number of days a person experienced at least one of the four types of activity restriction just described. It is the most inclusive measure of disability days and the least descriptive; 4 days of restricted activity may mean 4 bed days associated with serious illness or 4 days during which a person merely cut down on his or her usual activities due to a mild illness.

A single restricted-activity day may involve both a bed day and a work-loss or school-loss day. However, a cut-down day cannot overlap with any of these three types of disability days. In calculating the sum of restricted-activity days, each day is counted only once even if more than one type of activity restriction was involved.

Restricted-activity days may be associated with either persons or conditions. *Person days* are the number of days during which a person restricted his or her activity. *Condition days* are the number of days during which a condition caused a per-

son to restrict his or her activity. A person day of restricted activity can be caused by more than one condition. In such a case, each condition causing restriction is associated with that day of restricted activity. Therefore, the number of condition days of restricted activity may exceed the number of person days of restricted activity. This relationship holds for each type of restricted-activity day.

When two or more conditions cause a day of restricted activity, the conditions may be (1) both (all) acute, (2) one (some) acute and the other (some) chronic, or (3) both (all) chronic. The number of restricted-activity days associated with acute conditions includes groups (1) and (2); the number of such days associated with chronic conditions includes groups (2) and (3). The phrase “associated with” rather than “caused by” is used to indicate that some days associated with acute or chronic conditions are not necessarily caused solely by that type of condition.

Assessed health status—The categories related to this concept result from asking the respondent, “Would you say _____ health is excellent, very good, good, fair, or poor?” As such, it is based on a respondent’s opinion and not directly on any clinical evidence.

Terms relating to persons injured

Injury condition—An injury condition, or simply an injury, is a condition of the type that is classified according to the nature-of-injury code numbers (800–999) in the ninth revision of the International Classification of Diseases.¹ In addition to fractures, lacerations, contusions, burns, and so forth, which are commonly thought of as injuries, this group of codes includes poisonings and impairments caused by accidents or nonaccidental violence. Unless otherwise specified, the term injury is used to cover all of these.

A person may sustain more than one injury in a single accident (for instance, a broken leg and laceration of the scalp), so the number of injury conditions may exceed the number of persons injured.

Statistics of acute injury conditions include only injuries that involved medical attendance or at least a half day of restricted activity.

Episodes of persons injured—Each time a person is involved in an accident or nonaccidental violence causing injury that results in medical attention or at least 1 day of restricted activity, it is counted as a separate episode of a person injured. Therefore, one person may account for more than one episode of a person injured.

The number of episodes of persons injured is not equivalent to the number of accidents for several reasons: (1) the term “accident” as commonly used may not involve injury at all; (2) more than one injured person may be involved in a single accident, so the number of accidents resulting in injury would be less than the number of persons injured in accidents; and (3) the term “accident” ordinarily implies an accidental origin, whereas “persons injured” as used in the National Health In-

NOTE: A list of references follows the text.

terview Survey includes persons whose injuries resulted from certain nonaccidental violence.

The number of episodes of persons injured in a specified time interval is equal to or less than the incidence of injury conditions because a person may incur more than one injury in a single accident.

Terms relating to accidents

Motor vehicle—A motor vehicle is any mechanically or electrically powered device, not operated on rails, on which or by which a person or property can be transported or drawn on a land highway. Any object being towed by a motor vehicle (such as a trailer, coaster, sled, or wagon) is considered a part of the motor vehicle. Devices used solely for moving persons or materials within the confines of a building and its premises are not counted as motor vehicles.

Moving motor vehicle accident—An accident is classified as “moving motor vehicle” if at least one of the motor vehicles involved in the accident was moving at the time of the accident. This category is subdivided into “traffic” and “nontraffic” accidents.

Traffic moving motor vehicle accident—An accident is in the “traffic” category if it occurred on a public street or highway. It is considered to have occurred on the highway if it occurred wholly on the highway, originated on the highway, terminated on the highway, or involved a vehicle partially on the highway. (See “street or highway.”)

Nontraffic moving motor vehicle accident—The accident is in the “nontraffic” category if it occurred entirely in any place other than a public street or highway.

Street or highway—“Street or highway” means the entire width between property lines of a way or place, any part of which is open for use of the public as a matter of right or custom. This includes more than just the traveled part of the road. “Street or highway” includes the whole right-of-way. Public sidewalks are part of the street, but private driveways, private lanes, private alleys, and private sidewalks are *not* considered part of the street.

Nonmoving motor vehicle accident—If the motor vehicle was not moving at the time of the accident, the accident is considered a “nonmoving motor vehicle” accident and is classified in the “other accident” category. (See “other accident.”)

Accident while at work—An accident is classified as “while at work” if the injured person was 18 years of age or over and was at work at a job or business at the time the accident happened.

Home accident—An accident is classified as “home” if the injury occurred either inside or outside the house. “Outside the house” refers to the yard, buildings, and sidewalks on the property. “Home” includes not only the person’s own home but also any other home in which the person may have been injured.

Industrial place—This category includes factory buildings, railway yards, warehouses, workshops, loading platforms of factories or stores, construction projects (houses, buildings, bridges, new roads, and the like), as well as buildings undergoing remodeling. However, accidents in private homes undergoing remodeling are classified as home accidents.

Other accident—This category includes injuries in public places (such as tripping and falling in a store or on a public sidewalk) and also nonaccidental injuries such as homicidal and suicidal attempts. The survey does not cover the military population, but current disability of various types resulting from prior injury that occurred while the person was in the Armed Forces is covered and is included in this class. Mishaps for which the class of accident could not be ascertained are also included.

Terms relating to physician contacts

Physician contact—A physician contact is defined as consultation with a physician, in person or by telephone, for examination, diagnosis, treatment, or advice. (Physician contacts with hospital inpatients are not included.) The contact is considered to be a physician contact if the service is provided directly by the physician or by a nurse or other person acting under a physician’s supervision. For the purpose of this definition, “physician” includes doctors of medicine and osteopathic physicians. The term “doctor” is used in the interview rather than “physician” because of popular usage. However, the concept toward which all instructions are directed is that which is described here.

Physician contacts for services provided on a mass basis are not included in the tabulations. A service received on a mass basis is defined as any service involving only a single test (such as a test for diabetes) or a single procedure (such as a measles inoculation) when this single service is administered identically to all persons who are at the place for this purpose. Hence obtaining a chest x ray in a tuberculosis chest x ray trailer is not included as a physician contact. However, a special chest x ray given in a physician’s office or in an outpatient clinic is considered a physician contact.

If a physician is called to a house to see more than one person, the call is considered a separate physician contact for each person about whom the physician is consulted.

A physician contact is associated with the person about whom the advice is sought, even if that person does not actually see or consult the physician. For example, if a mother consults a physician about one of her children, the physician contact is ascribed to the child.

Interval since last physician contact—The interval since the last physician contact is the length of time prior to the week of interview since a physician was last consulted in person or by telephone for treatment or advice of any type whatever. A physician contact with a hospital inpatient can be counted as the last time a physician was seen, even though it is not included in the “physician contact” category.

Terms relating to hospitalization

Hospital—For this survey, a hospital is defined as any institution either (1) named in the listing of hospitals in the current *American Hospital Association Guide to the Health Care Field* or (2) found on the Master Facility Inventory List maintained by the National Center for Health Statistics.

Short-stay hospital—A short-stay hospital is one in which the type of service provided is general; maternity; eye, ear,

nose, and throat; children's; or osteopathic; or it may be the hospital department of an institution.

Hospital day—A hospital day is a day on which a person is confined to a hospital. It is counted as a hospital day only if the patient stays overnight. Thus a patient who enters the hospital on Monday afternoon and leaves Wednesday noon is considered to have had two hospital days.

Hospital days during the year—The number of hospital days during the year is the total number for all hospital episodes in the 12-month period prior to the interview week. For the purposes of this estimate, episodes overlapping the beginning or end of the 12-month period are subdivided so that only those days falling within the period are included.

Hospital episode—A hospital episode is any continuous period of stay of one night or more in a hospital as an inpatient except the period of stay of a well newborn infant. A hospital episode is recorded for a family member whenever any part of his hospital stay is included in the 12-month period prior to the interview week.

Hospital discharge—A hospital discharge is the completion of any continuous period of stay of one or more nights in a hospital as an inpatient except the period of stay of a well newborn infant. A hospital discharge is recorded whenever a present member of the household is reported to have been discharged from a hospital in the 12-month period prior to the interview week. (Estimates were based on discharges that occurred during the 6-month period prior to the interview.)

Length of hospital stay—The length of hospital stay is the duration in days, exclusive of the day of discharge, of a hospital discharge. (See "hospital discharge.")

Average length of stay—The average length of stay per discharged patient is computed by dividing the total number of hospital days for a specified group by the total number of discharges for that group.

Demographic terms

Age—The age recorded for each person is the age at last birthday. Age is recorded in single years and grouped in a variety of distributions depending on the purpose of the table.

Geographic region—For the purpose of classifying the population by geographic area, the States are grouped into four regions. These regions, which correspond to those used by the U.S. Bureau of the Census, are as follows:

Region	States included
Northeast.	Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania.
North Central. . .	Ohio, Illinois, Indiana, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Kansas, and Nebraska.
South.	Delaware, Maryland, District of Columbia, West Virginia, Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Oklahoma, Arkansas, and Texas.
West	Washington, Oregon, California, Nevada, New Mexico, Arizona, Idaho, Utah, Colorado, Montana, Wyoming, Alaska, and Hawaii.

Place of residence—The place of residence of a member of the civilian noninstitutionalized population is classified as inside a standard metropolitan statistical area (SMSA) or outside an SMSA. Place of residence inside an SMSA is further classified as either central city or not central city.

Standard metropolitan statistical area—The definitions and titles of SMSA's are established by the U.S. Office of Management and Budget with the advice of the Federal Committee on Standard Metropolitan Statistical Areas. Generally speaking, an SMSA consists of a county or group of counties containing at least one city (or twin cities) having a population of 50,000 or more plus adjacent counties that are metropolitan in character and are economically and socially integrated with the central city. In New England, towns and cities rather than counties are the units used in defining SMSA's. There is no limit to the number of adjacent counties included in the SMSA as long as they are integrated with the central city, nor is an SMSA limited to a single State; boundaries may cross State lines. The metropolitan population in this report is based on SMSA's as defined in the 1970 census and does not include any subsequent additions or changes.

Central city of an SMSA—The largest city in an SMSA is always a central city. One or two additional cities may be secondary central cities in the SMSA on the basis of one of the following criteria:

1. The additional city or cities must have a population one-third or more of that of the largest city and a minimum population of 25,000.
2. The additional city or cities must have at least 250,000 inhabitants.

Not central city of an SMSA—This includes all of the SMSA that is not part of the central city itself.

Not in SMSA—This includes all other places in the country.

Race—The population is divided into three racial groups, "white," "black," and "all other." "All other" includes Aleut, Eskimo or American Indian, Asian or Pacific Islander, and any other races. Race characterization is based on the respondent's description of his or her racial background.

Income of family or of unrelated individuals—Each member of a family is classified according to the total income of the family of which he or she is a member. Within the household, all persons related to each other by blood, marriage, or adoption constitute a family. Unrelated individuals are classified according to their own incomes.

The income recorded is the total of all income received by members of the family (or by an unrelated individual) in the 12-month period preceding the week of interview. Income from all sources—for example, wages, salaries, rents from property, pensions, and help from relatives—is included.

Currently employed—Persons 17 years of age and over who reported that at any time during the 2-week period covered by the interview they either worked at or had a job or business are currently employed. Current employment includes paid work as an employee of someone else; self-employment in business, farming, or professional practice; and unpaid work in a family business or farm. Persons who were temporarily absent from a job or business because of a temporary illness, vacation,

strike, or bad weather are considered as currently employed if they expected to work as soon as the particular event causing the absence no longer existed.

Freelance workers are considered currently employed if they had a definite arrangement with one employer or more to work for pay according to a weekly or monthly schedule, either full time or part time.

Excluded from the currently employed population are persons who have no definite employment schedule but work only when their services are needed. Also excluded from the currently employed population are (1) persons receiving revenue from an enterprise but not participating in its operation, (2) persons doing housework or charity work for which they receive no pay, (3) seasonal workers during the portion of the year they were not working, and (4) persons who were not working, even though having a job or business, but were on layoff or looking for work.

The number of currently employed persons estimated from the National Health Interview Survey (NHIS) will differ from the estimates prepared from the Current Population Survey (CPS) of the U.S. Bureau of the Census for several reasons. In addition to sampling variability they include three primary conceptual differences, namely: (1) NHIS estimates are for persons 17 years of age and over; CPS estimates are for persons 16 years of age and over. (2) NHIS uses a 2-week reference period, while CPS uses a 1-week reference period. (3) NHIS is a continuing survey with separate samples taken weekly; CPS is a monthly sample taken for the survey week which includes the 12th of the month.

The most detailed operational definition of all of these terms is found in the *NHIS Interviewer's Manual*. Instructions are given in the Manual on how problem cases associated with each concept are to be handled.

D1 RESTRICTED ACTIVITY PAGE PERSON 1	
<i>Hand calendar.</i> (The next questions refer to the 2 weeks outlined in red on that calendar, beginning Monday, (date) and ending this past Sunday (date).)	
D1 Refer to age. ☐ Under 5 (4) ☐ 5-17 (3) ☐ 18 and over (1)	
1a. DURING THOSE 2 WEEKS, did -- work at any time at a job or business, not counting work around the house? (Include unpaid work in the family [farm/business].) 1 ☐ Yes (Mark "Wa" box, THEN 2) 2 ☐ No	
b. Even though -- did not work during those 2 weeks, did -- have a job or business? 1 ☐ Yes (Mark "Wb" box, THEN 2) 2 ☐ No (4)	
2a. During those 2 weeks, did -- miss any time from a job or business because of illness or injury? ☐ Yes 00 ☐ No (4)	
b. During that 2-week period, how many days did -- miss more than half of the day from -- job or business because of illness or injury? 00 ☐ None (4) No. of work-loss days (4)	
3a. During those 2 weeks, did -- miss any time from school because of illness or injury? ☐ Yes 00 ☐ No (4)	
b. During that 2-week period, how many days did -- miss more than half of the day from school because of illness or injury? 00 ☐ None No. of school-loss days	
4a. During those 2 weeks, did -- stay in bed because of illness or injury? ☐ Yes 00 ☐ No (6)	
b. During that 2-week period, how many days did -- stay in bed more than half of the day because of illness or injury? 00 ☐ None (6) No. of bed days (Mark "BD" box, THEN D2)	

D2	
Refer to 2b and 3b. ☐ No days in 2b or 3b (6) ☐ 1 or more days in 2b or 3b (5)	
5. On how many of the (number in 2b or 3b) days missed from [work/school] did -- stay in bed more than half of the day because of illness or injury? 00 ☐ None No. of days	
Refer to 2b, 3b, and 4b. 6a. (Not counting the day(s) [missed from work missed from school (and) in bed], Was there any (OTHER) time during those 2 weeks that -- cut down on the things -- usually does because of illness or injury? ☐ Yes 00 ☐ No (D3)	
b. (Again, not counting the day(s) [missed from work missed from school (and) in bed], During that period, how many (OTHER) days did -- cut down for more than half of the day because of illness or injury? 00 ☐ None No. of cut-down days	
D3 Refer to 2-6. ☐ No days in 2-6 (Mark "No" in RD, THEN NP) ☐ 1 or more days in 2-6 (Mark "Yes" in RD, THEN 7)	
Refer to 2b, 3b, 4b, and 6b. 7a. What (other) condition caused -- to [miss work miss school (or) stay in bed (or) cut down] during those 2 weeks? (Enter condition in C2, THEN 7b)	
b. Did any other condition cause -- to [miss work miss school (or) stay in bed (or) cut down] during that period? 1 ☐ Yes (Reask 7a and b) 2 ☐ No	
FOOTNOTES	

E. 2-WEEK DOCTOR VISITS PROBE PAGE

Read to respondent(s): These next questions are about health care received during the 2 weeks outlined in red on that calendar.			
E1	Refer to age.	E1	☐ Under 14 (1b) ☐ 14 and over (1a)
1a. During those 2 weeks, how many times did --- see or talk to a medical doctor? (Include all types of doctors, such as dermatologists, psychiatrists, and ophthalmologists, as well as general practitioners and osteopaths.) (Do not count times while an overnight patient in a hospital.)		1a. and b.	00 ☐ None Number of times
b. During those 2 weeks, how many times did anyone see or talk to a medical doctor about ---? (Do not count times while an overnight patient in a hospital.)		(NP)	
2a. (Besides the time(s) you just told me about) During those 2 weeks, did anyone in the family receive health care at home or go to a doctor's office, clinic, hospital or some other place? Include care from a nurse or anyone working with or for a medical doctor. Do not count times while an overnight patient in a hospital. ☐ Yes ☐ No (3a)			
b. Who received this care? Mark "DR Visit" box in person's column.		2b.	☐ DR Visit
c. Anyone else? ☐ Yes (Reask 2b and c) ☐ No			
Ask for each person with "DR Visit" in 2b: d. How many times did --- receive this care during that period?		d.	Number of times
3a. (Besides the time(s) you already told me about) During those 2 weeks, did anyone in the family get any medical advice, prescriptions or test results over the PHONE from a doctor, nurse, or anyone working with or for a medical doctor? ☐ Yes ☐ No (E2)			
b. Who was the phone call about? Mark "Phone call" box in person's column.		3b.	☐ Phone call
c. Were there any calls about anyone else? ☐ Yes (Reask 3b and c) ☐ No			
Ask for each person with "Phone call" in 3b: d. How many telephone calls were made about ---?		d.	Number of calls
E2	Add numbers in 1, 2d, and 3d for each person. Record total number of visits and calls in "2-WK. DV" box in item C1.

H. CONDITION LISTS 1 AND 2

Read to respondent(s) and ask list specified in A2:

Now I am going to read a list of medical conditions. Tell me if anyone in the family has any of these conditions, even if you have mentioned them before.

1		2	
1a. Does anyone in the family {read names} NOW have – If "Yes," ask 1b and c. b. Who is this? c. Does anyone else NOW have – Enter condition and letter in appropriate person's column.		2a. Does anyone in the family {read names} NOW have – If "Yes," ask 2b and c. b. Who is this? c. Does anyone else NOW have – Enter condition and letter in appropriate person's column.	
A. PERMANENT stiffness or any deformity of the foot, leg, fingers, arm, or back? (Permanent stiffness – joints will not move at all.)		A–L are conditions affecting {Hearing, Vision, Speech}	
B. Paralysis of any kind?		Conditions O–W are impairments.	
1d. DURING THE PAST 12 MONTHS, did anyone in the family have – If "Yes," ask 1e and f. e. Who was this? f. DURING THE PAST 12 MONTHS, did anyone else have – Enter condition and letter in appropriate person's column. Conditions C–N and V are conditions affecting the bone and muscle. Conditions O–U and W–Z are conditions affecting the skin.		Conditions Y and Z affect the nervous system.	
C. Arthritis of any kind or Rheumatism?	Reask 1d	A. Deafness in one or both ears?	Reask 2a
D. Gout?	P. Eczema or Psoriasis? (ek'sa-ma) or (so-rye-uh-sis)	B. Any other trouble hearing with one or both ears?	O. Palsy or Cerebral palsy? (ser'a-bral)
E. Lumbago?	Q. TROUBLE with dry or itching skin?	C. Tinnitus or ringing in the ears?	P. Paralysis of any kind?
F. Osteomyelitis? (os-tee-oh-my-uh-lye'tis)	R. TROUBLE with acne?	D. Blindness in one or both eyes?	Q. Curvature of the spine?
G. A bone cyst or bone spur?	S. A skin ulcer?	E. Cataracts?	R. REPEATED trouble with back or spine?
H. Any other disease of the bone or cartilage?	T. Any kind of skin allergy?	F. Glaucoma?	S. Any TROUBLE with fallen arches or flatfeet?
I. A trick knee?	U. Dermatitis or any other skin trouble?	G. Color blindness?	T. A clubfoot?
J. A slipped or ruptured disc?	V. TROUBLE with fallen arches, flatfeet, or clubfoot?	H. A detached retina or any other condition of the retina?	U. PERMANENT stiffness or any deformity of the foot, leg, or back? (Permanent stiffness – joints will not move at all.)
K. Curvature of the spine?	W. TROUBLE with ingrown toenails or fingernails?	I. Any other trouble seeing with one or both eyes EVEN when wearing glasses?	V. PERMANENT stiffness or any deformity of the fingers, hand, or arm?
L. REPEATED trouble with neck, back, or spine?	X. TROUBLE with bunions, corns, or calluses?	J. A cleft palate or Harelip?	W. Mental retardation?
M. Bursitis or Synovitis? (sin-o-vye'tis)	Y. Any disease of the hair or scalp?	K. Stammering or Stuttering?	X. Any condition caused by an accident or injury which happened more than 3 months ago? If "Yes," ask: What is the condition?
N. Any disease of the muscles or tendons?	Z. Any disease of the lymph or sweat glands?	L. Any other speech defect?	Y. Epilepsy?
O. A tumor, cyst, or growth of the skin?		M. A missing finger, hand, or arm; toe, foot, or leg?	Z. REPEATED convulsions, seizures, or blackouts?
		N. A missing (breast), kidney, or lung?	

FORM H15-1 (1983) (3-4-83)

H. CONDITION LISTS 3 AND 4

Read to respondent(s) and ask list specified in A2: Now I am going to read a list of medical conditions. Tell me if anyone in the family has had any of these conditions, even if you have mentioned them before.			
3	3a. DURING THE PAST 12 MONTHS, did anyone in the family (read names) have — If "Yes," ask 3b and c. b. Who was this? c. DURING THE PAST 12 MONTHS, did anyone else have — Enter condition and letter in appropriate person's column. Make no entry in item C2 for cold; flu; red, sore, or strep throat; or "virus" even if reported in this list. Conditions affecting the digestive system.		
	A. Gallstones?	Reask 3a N. Any other stomach trouble?	
	B. Any other gallbladder trouble?	O. Enteritis?	
	C. Cirrhosis of the liver?	P. Diverticulitis? (Dye-ver-tilc-yoo-lye'tis)	
	D. Fatty liver?	Q. Colitis?	
	E. Hepatitis?	R. A spastic colon?	
	F. Yellow jaundice?	S. FREQUENT constipation?	
	G. Any other liver trouble?	T. Any other bowel trouble?	
	H. Any disease of the pancreas?	U. Any other intestinal trouble?	
	I. An ulcer?	V. Cancer of the stomach, colon, or rectum?	
	J. A hernia or rupture?	W. During the past 12 months, did anyone (else) in the family have any other condition of the digestive system?	
	K. Any disease of the esophagus?	If "Yes," ask: Who was this? — What was the condition? Enter in item C2. THEN reask W.	
	L. Gastritis?		
	M. FREQUENT indigestion?		
4	4a. DURING THE PAST 12 MONTHS, did anyone in the family (read names) have — If "Yes," ask 4b and c. b. Who was this? c. DURING THE PAST 12 MONTHS, did anyone else have — Enter condition and letter in appropriate person's column.		
	A. A goiter or other thyroid trouble?		Glandular disorders
	B. Diabetes?		
	C. Cystic fibrosis?		
	D. Anemia?		Blood disorder
	E. Epilepsy?		
	F. Multiple sclerosis?		Condition affecting the nervous system
	G. Migraine?		
	H. Neuralgia or Neuritis?		
	I. Sciatica? (si-et i-koh)		
	J. Nephritis?		
	K. Kidney stones?		Genito-urinary conditions
	L. Any other kidney trouble?		
	M. Bladder trouble?		
N. Prostate trouble?			
O. Any disease of the uterus or ovary?			
P. Any other female trouble?			
Q. Cancer of any kind?			

FORM HIS-1 (1983) (3-4-83)

H. CONDITION LISTS 5 AND 6

Read to respondent(s) and ask list specified in A2.

Now I am going to read a list of medical conditions. Tell me if anyone in the family has had any of these conditions, even if you have mentioned them before.

5

5a. Has anyone in the family (read names) EVER had -

If "Yes," ask 5b and c.

b. Who was this?

c. Has anyone else EVER had -

Enter condition and letter in appropriate person's column.

Conditions affecting the heart and circulatory system.

A. Rheumatic fever?

G. A stroke or a Cerebrovascular accident? (ser'a-bro vas ku-lar)

B. Rheumatic heart disease?

H. A hemorrhage of the brain?

C. Hardening of the arteries or Arteriosclerosis?

I. Angina pectoris? (pek'to-ris)

D. Congenital heart disease?

J. A myocardial infarction?

E. Coronary heart disease?

K. Any other heart attack?

F. Hypertension, sometimes called High blood pressure?

5d. DURING THE PAST 12 MONTHS, did anyone in the family have -

If "Yes," ask 5e and f.

e. Who was this?

f. DURING THE PAST 12 MONTHS, did anyone else have -

Enter condition and letter in appropriate person's column.

Conditions affecting the heart and circulatory system.

L. Damaged heart valves?

R. Gangrene?

M. Tachycardia or Rapid heart?

S. Varicose veins?

N. A heart murmur?

T. Hemorrhoids or Piles?

O. Any other heart trouble?

U. Phlebitis or Thrombophlebitis?

P. An aneurysm? (an yoo-rizm)

V. Any other condition affecting blood circulation?

Q. Any blood clots?

6

6a. DURING THE PAST 12 MONTHS, did anyone in the family (read names) have -

If "Yes," ask 6b and c.

b. Who was this?

c. DURING THE PAST 12 MONTHS, did anyone else have -

Enter condition and letter in appropriate person's column.

Make no entry in item C2 for cold; flu; red, sore, or strep throat; or "virus" even if reported in this list.

Conditions affecting the respiratory system.

A. Bronchitis?

Reask 6a.
K. Emphysema?

B. Bronchiectasis? (brong ke-ek tah-sis)

L. Pleurisy?

C. Asthma?

M. Tuberculosis?

D. Hay fever?

N. An abscess of the lung?

E. A nasal polyp?

O. A tumor, cyst, or growth of the throat, larynx, or trachea?

F. Sinus trouble?

P. Any work-related respiratory condition such as dust on the lungs, silicosis or pneu-mo-co-ni-o-sis?

G. A deflected or deviated nasal septum?

H. *Tonsillitis or enlargement of the tonsils or adenoids?

Q. During the past 12 months did anyone (else) in the family have any other respiratory, lung, or pulmonary condition? If "Yes," ask: Who was this? What was the condition? Enter in item C2, THEN reask Q.

I. *Laryngitis?

J. A tumor, cyst, or growth of the bronchial tube or lung?

*If reported in this list only, ask:

1. How many times did -- have (condition) in the past 12 months?

If 2 or more times, enter condition in item C2.

If only 1 time, ask:

2. How long did it last? If 1 month or longer, enter in item C2.

If less than 1 month, do not record.

If tonsils or adenoids were removed during past 12 months, enter the condition causing removal in item C2.

J. HOSPITAL PAGE		HOSPITAL STAY 1		
1. Refer to C1, "HOSP." box.		1.	Person number _____	
2. You said earlier that -- was a patient in the hospital since (13-month hospital date) a year ago. On what date did -- enter the hospital ([the last time/the time before that])? Record each entry date in a separate Hospital Stay column.		2.	Month _____	Date _____ Year 19 ____
3. How many nights was -- in the hospital?		3.	0000 ☐ None (Next HS) _____ Nights	
4. For what condition did -- enter the hospital? • For delivery ask: Was this a normal delivery? If "No," ask: What was the matter? • For newborn ask: Was the baby normal at birth? If "No," ask: What was the matter? • For initial "No condition" ask: Why did -- enter the hospital? • For tests, ask: What were the results of the tests? If no results, ask: Why were the tests performed?		4.	1 ☐ Normal delivery 2 ☐ Normal at birth 3 ☐ No condition ☐ Condition } (5)	
J1	Refer to questions 2, 3, and 2-week reference period.	J1	☐ At least one night in 2-week reference period (Enter condition in C2, THEN 5) ☐ No nights in 2-week reference period (5)	
5a. Did -- have any kind of surgery or operation during this stay in the hospital, including bone settings and stitches?		5a.	1 ☐ Yes 2 ☐ No (6)	
b. What was the name of the surgery or operation? If name of operation not known, describe what was done.		b.	(1) _____ (2) _____ (3) _____	
c. Was there any other surgery or operation during this stay?		c.	☐ Yes (Reask 5b and c) ☐ No	
6. What is the name and address of this hospital?		6.	Name _____ Number and street _____ City or County _____ State _____	
FOOTNOTES				

FORM HIS-1 (1993) (2-4-93)

CONDITION 1		Person No. _____																											
1. Name of condition Mark "2-wk. ref. pd." box without asking if "DV" or "HS" in C2 as source.																													
2. When did [---/anyone] last see or talk to a doctor or assistant about --- (condition)? ☐ Interview week (Reask 2) ☐ 2-wk. ref. pd. ☐ Over 2 weeks, less than 6 mos. ☐ 6 mos., less than 1 yr. ☐ 1 yr., less than 2 yrs. ☐ 2 yrs., less than 5 yrs. ☐ 5 yrs. or more ☐ Dr. seen, DK when ☐ DK if Dr. seen ☐ Dr. never seen (3b)																													
3a. (Earlier you told me about --- (condition)) Did the doctor or assistant call the (condition) by a more technical or specific name? ☐ Yes ☐ No ☐ DK Ask 3b if "Yes" in 3a, otherwise transcribe condition name from item 1 without asking:																													
b. What did he or she call it? _____ Specify ☐ Color Blindness (NC) ☐ Normal pregnancy, normal delivery, vasectomy ☐ Cancer (3e) ☐ Old age (NC) ☐ Other (3e)																													
c. What was the cause of --- (condition in 3b)? (Specify) 																													
Mark box if accident or injury ☐ Accident/injury (5)																													
d. Did the (condition in 3b) result from an accident or injury? ☐ Yes (5) ☐ No Ask 3e if the condition name in 3b includes any of the following words: <table style="width: 100%; font-size: small;"> <tr> <td>Ailment</td> <td>Cancer</td> <td>Disease</td> <td>Problem</td> </tr> <tr> <td>Anemia</td> <td>Condition</td> <td>Disorder</td> <td>Rupture</td> </tr> <tr> <td>Asthma</td> <td>Cyst</td> <td>Growth</td> <td>Trouble</td> </tr> <tr> <td>Attack</td> <td>Defect</td> <td>Measles</td> <td>Tumor</td> </tr> <tr> <td>Bad</td> <td></td> <td></td> <td>Ulcer</td> </tr> </table>			Ailment	Cancer	Disease	Problem	Anemia	Condition	Disorder	Rupture	Asthma	Cyst	Growth	Trouble	Attack	Defect	Measles	Tumor	Bad			Ulcer

O. ALCOHOL/HEALTH PRACTICES PAGE		RT 64
Sample Person Number _____		3-4
01	Refer to household composition and age.	5
	1 ☐ Deleted (Next SP)	
	2 ☐ Under 18 (Next SP)	
	3 ☐ 18 and over, callback required (Next SP)	
	4 ☐ 18 and over, noninterview (Specify, THEN next SP)	
5 ☐ 18 and over, available (1)		
Read to respondent: (Name of SP), the following questions concern your health practices, smoking, and alcohol use. (It is not necessary for anyone else to be present.)		
1. How many hours do you usually sleep at night?		6-7
_____ Hours		
2. How often do you eat breakfast — almost every day, sometimes, rarely, or never?		8
1 ☐ Every day 2 ☐ Sometimes 3 ☐ Rarely or never 4 ☐ Other (Specify) _____		
3. Including evening snacks, how often do you eat between meals — almost every day, sometimes, rarely, or never?		9
1 ☐ Every day 2 ☐ Sometimes 3 ☐ Rarely or never 4 ☐ Other (Specify) _____		
4. Would you say that you are physically more active, less active, or about as active as other persons your age?		10
1 ☐ More active 2 ☐ Less active 3 ☐ Same 4 ☐ Other (Specify) _____		
5a. Have you smoked at least 100 cigarettes in your life?		11
1 ☐ Yes 2 ☐ No (8)		
b. Do you smoke cigarettes now?		12
1 ☐ Yes 2 ☐ No		
c. On the average, about how many cigarettes a day [do/did] you smoke?		13-14
_____ Number 98 ☐ Never smoked regularly (8)		
02	Refer to 5b.	15
	1 ☐ "Yes" in 5b (7) 2 ☐ "No" in 5b (6)	
6. About how long has it been since you last smoked cigarettes fairly regularly?		16-18
_____ Number { 2 ☐ Days 3 ☐ Weeks 4 ☐ Months 5 ☐ Years 000 ☐ Never smoked regularly (8)		
03	Refer to 6.	19
	1 ☐ Less than 5 years (7b) 2 ☐ 5 years or more (8)	
	7a. In the past 5 years, have you EVER tried to stop smoking cigarettes?	20
	1 ☐ Yes 2 ☐ No (8)	
	b. Now I am going to read a list of methods which some people use to stop smoking cigarettes. Tell me which of these methods you used in the past 5 years to stop or try to stop smoking.	
	(1) Did you attend a formal program SUCH AS SmokEnders, the American Cancer Society program or American Lung Association program?	
	1 ☐ Yes 2 ☐ No	21
	(2) Did you go to a health professional for help, SUCH AS a physician, psychologist, or psychiatrist?	
	1 ☐ Yes 2 ☐ No	22
	(3) Did you use special filters or cigarette holders to regulate the amount of smoke inhaled in an attempt to stop smoking?	
	1 ☐ Yes 2 ☐ No	23
	(4) Did you switch to lower tar and nicotine cigarettes in an attempt to stop smoking?	
	1 ☐ Yes 2 ☐ No	24
	(5) Did you stop or try to stop smoking with a few friends, relatives, or acquaintances?	
	1 ☐ Yes 2 ☐ No	25
(6) Did you stop or try to stop entirely on your own?		
1 ☐ Yes 2 ☐ No	26	
(7) Did you use some other method to stop or try to stop smoking?		
1 ☐ Yes 2 ☐ No	27	
(Specify) _____		
Read to respondent: These next questions are about drinking alcoholic beverages. Included are liquor such as whiskey, rum, gin, or vodka, and beer, and wine, and any other type of alcoholic beverage.		
8a. In YOUR ENTIRE LIFE have you had at least 12 drinks of ANY kind of alcoholic beverage?		28
1 ☐ Yes 2 ☐ No (8c)		
b. In ANY ONE YEAR have you had at least 12 drinks of ANY kind of alcoholic beverage?		29
1 ☐ Yes (9) 2 ☐ No		
c. What is your MAIN reason for not drinking?		30-31
00 ☐ No need/not necessary 01 ☐ Don't care for/dislike it 02 ☐ Medical/health reasons 03 ☐ Religious/moral reasons 04 ☐ Brought up not to drink 05 ☐ Costs too much 06 ☐ Family member an alcoholic or problem drinker 07 ☐ Infrequent drinker 08 ☐ Other (Specify) _____		(36)

9. Not counting small tastes, how old were you when you started drinking alcoholic beverages? 32-33 _____ Years old <i>Hand calendar.</i> 10a. Did you have a drink during the 2-week period [outlined on that calendar/ beginning Monday, (date) and ending Sunday (date)]? 34 1 ☐ Yes 2 ☐ No (10c) b. During that period, when did you last have a drink? 35-40 _____ 19 _____ (11) Month Date Year c. When was your last drink prior to that 2-week period? 41-46 _____ 19 _____ Month Date Year	13a. During that 2-week period, on how many days did you drink any liquor, such as whiskey, rum, gin, or vodka? 66-67 Days 00 ☐ None or never (05) b. During that 2-week period, on the day(s) when you drank liquor, about how many drinks did you have a day? 68-69 Drinks c. During that 2-week period, what was the total number of drinks of liquor you had? 70-72 _____ Drinks d. About how many ounces of liquor were in a typical drink that you had during that period? 73-74 _____ Ounces
04 47 Refer to 10c. 1 ☐ Over 2 weeks, less than 1 year (17) 2 ☐ 1 year or more (26) 11a. During that 2-week period, on how many days did you drink any beer? 48-49 Days 00 ☐ None or never (12) b. During that 2-week period, on the day(s) when you drank beer, about how many beers did you drink a day? 50-51 Beers c. During that 2-week period, what was the total number of beers you drank? 52-54 _____ Beers d. About how many ounces were in a typical can or bottle or glass of beer that you drank during that period? 55-56 _____ Ounces 12a. During that 2-week period, on how many days did you drink any wine? 57-58 Days 00 ☐ None or never (13) b. During that 2-week period, on the day(s) when you drank wine, about how many glasses of wine did you drink a day? 59-60 Glasses c. During that 2-week period, what was the total number of glasses of wine you drank? 61-63 _____ Glasses d. About how many ounces of wine were in a typical glass that you drank during that period? 64-65 _____ Ounces	05 75 Refer to 11a, 12a, and 13a. 1 ☐ One day and one beverage type (16) 2 ☐ Only one beverage type (15) 3 ☐ 14 days in 11a, 12a, or 13a (Intro) 8 ☐ Other (14) <i>Read to respondent:</i> I have asked you about beer, wine, and liquor separately. Now I want you to think about them combined. 14. During the 2-week period [outlined on that calendar/beginning Monday, (date) and ending Sunday (date)], on how many days altogether did you drink alcoholic beverages, that is, beer, or wine, or liquor? 76-77 _____ Days (15) 01 ☐ One day only (16) INTRO 78 I have asked you about beer, wine, and liquor separately. Now I want you to think about them combined. <i>Refer to questions 11b, 12b, and 13b.</i> 15a. During that 2-week period, did you have more than (largest number in 11b, 12b, or 13b) drink(s) on a single day? 79-80 1 ☐ Yes 2 ☐ No (16) b. During that 2-week period, on how many days did you have more than (largest number in 11b, 12b, or 13b) drink(s) of beer, or wine, or liquor? 81-82 _____ Days 01 ☐ One day only (15e) c. What was the largest number of drinks you had on any one of those days? 83-84 _____ Drinks d. On how many days during that 2-week period did you have (number in 15c) drinks? 85-86 _____ Days (16) e. How many drinks did you have on that day? _____ Drinks

Health, United States, 1985:

Up-to-Date Health Facts in One Convenient Source

Health

United
States

1985

Health care competition and cost containment efforts by the Federal Government may be paying off, according to *Health, United States, 1985*. This tenth annual report to Congress on the Nation's health says hospital care expenditures declined in 1984, reversing a 20-year trend. The publication from the National Center for

Health Statistics, a part of the U.S. Department of Health and Human Services, contains facts and statistics on many health subjects in easy-to-read form. Data on life expectancy, infant mortality, leading causes of death, and many other facets of America's health are presented in the 1985 edition.

Vital and Health Statistics series descriptions

- SERIES 1. Programs and Collection Procedures**—Reports describing the general programs of the National Center for Health Statistics and its offices and divisions and the data collection methods used. They also include definitions and other material necessary for understanding the data.
- SERIES 2. Data Evaluation and Methods Research**—Studies of new statistical methodology including experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. Studies also include comparison of U.S. methodology with those of other countries.
- SERIES 3. Analytical and Epidemiological Studies**—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- SERIES 4. Documents and Committee Reports**—Final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. Comparative International Vital and Health Statistics Reports**—Analytical and descriptive reports comparing U.S. vital and health statistics with those of other countries.
- SERIES 10. Data From the National Health Interview Survey**—Statistics on illness, accidental injuries, disability, use of hospital, medical, dental, and other services, and other health-related topics, all based on data collected in the continuing national household interview survey.
- SERIES 11. Data From the National Health Examination Survey and the National Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement of national samples of the civilian noninstitutionalized population provide the basis for (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- SERIES 12. Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. Data on Health Resources Utilization**—Statistics on the utilization of health manpower and facilities providing long-term care, ambulatory care, hospital care, and family planning services.
- SERIES 14. Data on Health Resources: Manpower and Facilities**—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- SERIES 15. Data From Special Surveys**—Statistics on health and health-related topics collected in special surveys that are not a part of the continuing data systems of the National Center for Health Statistics.
- SERIES 20. Data on Mortality**—Various statistics on mortality other than as included in regular annual or monthly reports. Special analyses by cause of death, age, and other demographic variables; geographic and time series analyses; and statistics on characteristics of deaths not available from the vital records based on sample surveys of those records.
- SERIES 21. Data on Natality, Marriage, and Divorce**—Various statistics on natality, marriage, and divorce other than as included in regular annual or monthly reports. Special analyses by demographic variables; geographic and time series analyses; studies of fertility; and statistics on characteristics of births not available from the vital records based on sample surveys of those records.
- SERIES 22. Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys based on vital records are included in Series 20 and 21, respectively.
- SERIES 23. Data From the National Survey of Family Growth**—Statistics on fertility, family formation and dissolution, family planning, and related maternal and infant health topics derived from a periodic survey of a nationwide probability sample of ever-married women 15–44 years of age.
